Education

BS in Computer Science and Minor in Mathematics Aug 2021 – Dec 2024

University of New Mexico

Relevant Coursework: Computer System, Data Structure and Algorithm, Design of Large Program, Software Engineering, Intro to Database Management, Cybersecurity, Operating System, Numerical Computing and Calculus I, II and III.

WORK EXPERIENCE

***Full Stack Developer Intern**, Varosa Technology, Nepal* December 2023 – Current

- Created a website for Melbourne Event Solutions ensuring a dynamic a visually appealing user experience.
- Successfully debugged existing codebase, leading in a 20% enhancement in website performance.
- Actively engaged with developers to conceptualize and design innovative solutions for technical challenges, contributing to the implementation of 5 new features.
- Improved website accessibility by implementing responsive design, correlating with a 25% uptick in page views in mobile traffic.
- Developed and maintained backend systems using Java, ensuring high-quality code through rigorous testing and debugging processes.
- Collaborated with cross-functional teams including developers, designers, and product managers to implement new features and optimize existing code.
- Utilized integrated development environments such as Eclipse and version control systems like Git to streamline development processes and facilitate team collaboration.
- Automated infrastructure, testing, and deployments using tools like Jenkins, Puppeteer, and Selenium, reducing manual effort by 30% and improving deployment accuracy.
- Analyzed and fixed defects in existing products, ensuring seamless user experience and customer satisfaction.

***IT Support Tech**, The University Of New Mexico Health Science Center* July 2023 –Current

- Enhanced website management efficiency by 40% through proficient utilization of Cascade Server and DNN Management System.
- Implemented Zabbix monitoring software, reducing network security incidents by 25% and ensuring 100% compliance with industry standards.
- Installed and maintained IoT monitoring devices, improving equipment uptime by 30%.
- Identified and mitigated 15 security threats by monitoring network traffic and firewall configurations, leveraging Cisco Meraki security appliances.
- Evaluated and recommended IT technologies, leading to a 10% reduction in IT infrastructure costs while enhancing performance and security.

PROJECTS

- Melbourne Event Solutions and Personal portfolio
  - Utilized Keyframes to ensure responsiveness, contributing in a 25% increase in page views and a 15% increase in user engagement across various devices.
- E-commerce Website Redesign:
  - Partnered with a team to redesign and enhance the user experience of an existing e-commerce website, implementing new UI components and functionality.

SKILLS

- Proficient in Python, Java, C, R, HTML, CSS, JavaScript, MySQL, ensuring versatile application development capabilities.
- Familiarity with React.js and strong understanding of design principles and user experience (UX) design.
- Experienced in software development, troubleshooting, and data structures, contributing to robust and efficient solutions.
- Skilled in Active Directory, AWS, GIT, Cascade Server, DNN Server, facilitating seamless system management.
- Knowledge of Cisco Meraki, Microsoft Office 365, Adobe Creative Cloud, enhancing network administration and productivity.
- Proficient in Windows, Linux, MacOS operating systems, enabling effective development and deployment across all platforms.
